- No hissing, crackling and no more searching for frequency
- Removable Telescopic Antenna / Connector for Roof Aerial
- Alarm Clock

Digital radio! Digital what...?

Digital Radio is the latest standard for radio reception via antenna. It takes analogue FM radio into the digital era. It offers a greater choice of programmes, new services, an excellent sound quality, simple operation and no search for frequencies. All these features can be enjoyed without any geographical limitation within a country. The stylish NOXON dRadio 100 enables you to receive digital radio, but also traditional FM radio with RDS support in a most convenient way.

Why use digital radio?

Within the European Union many countries implemented digital radio streaming, called DAB or DAB+, successfully to complement and eventually replace analogue FM radio. Some countries offer additional services, like weather reports, traffic information etc. over the DAB(+) signal.

No disturbing noises. No frequency search. And free from reception interference

With the NOXON dRadio 100 all radio programs will automatically be searched and recognized without troubles. There is no need to change the frequency of your favourite radio station throughout the country. Also interference of other stations or radio frequency devices is turned into a minimum.

More choice of radio stations. Free and receivable without any geographic limitation within a country

Many radio stations will switch from analogue into digital. There will be a wider choice of radio stations to receive opposite to the limited analogue FM frequency range. Stations vary from specialized genre to nationwide stations. Through the higher digital compression of the stations on DAB and DAB+ there is a lot more room for new specialized stations and services around these stations or even providing general, but personalized information to the end-user.

The „+“ makes the difference

The NOXON dRadio 100 is equipped with the latest DAB+ standard that is backwards compatible to DAB and therefore offers the latest possibilities in digital radio reception. Even the analogue FM reception is not ignored. Therefore the NOXON dRadio 100 is ready for the future broadcasts of your favourite radio stations!

NOXON dRadio100
