

## ReceiverSystem TerraTV Radio+

TerraTec's TerraTV Radio+ offers you the first TV/Radio card in this price class with RDS support, which brings together both television and radio in one optimised system. See or hear your favourite stations and comfortably read teletext.

The supplied radio software provides extremely comfortable operation and simplifies finding and configuration of all radio stations thanks to its automatic channel search. To conserve on the radio software user interface's space requirements, a special minimal view can be activated. Continuously informed - through the support of RDS functions, multitudes of additional radio information is made available to you, keeping you up-to-date. Receive RDS information radiotext, program type, time, traffic reports, station name and additional information on music programs. Using the mixer function you have the ability to make recordings of the program received, which you can then edit. A timer function, which can activate your favorite shows at specific times, rounds out the functional features of the radio software.

Through the performance of the 32-bit TV software, experience fully stable, flicker-free TV displayed on your PC monitor. So that everything always appears correctly, the TV software from TerraTV Radio+ utilizes various display modes. Scale the TV display in television mode fully as you wish or select the display standards 4:3 or 16:9 for optimization. If that's not enough, use the full-screen mode for maximum screen area without distracting menus or tool bars. Are you looking for an interesting program? The multiple-station preview can give you a hand by displaying an overview of up to 100 stations simultaneously for fast navigation through the station jungle.

Forget about tiresome manual station selection. The search function of the TV software automates the installation of stations without manual intervention. The station names are also assigned and saved at the same time. The integrated capture function lets you make compressed recordings of running programs from a connected video camera or VCR. The degree of compression is user-definable. With the aid of the included and award winning Ulead ® Video Studio 3.0® video processing software, you can effectively and comfortably edit these recordings. Create professional scene transitions, flow elegant text passages across the screen or add the final polishing touches to your home video using the audio dubbing function. Video Studio 3.0 allows you to save video sequences in AVI or MPEG-1 formats. Set your creativity free!

TerraTV Radio+ 32-bit teletext software offers high display speed and optimal user comfort. Forget about long waits and keying in page numbers. Simply navigate the world of teletext with your mouse. The teletext software has an internal buffer that automatically loads all of the available pages for a given program, allowing them to be displayed at the touch of a key. Find an interesting teletext page with a valuable financial tip or a new cooking recipe? – Then simply save it with the archive function or print it out for

future reference. Because you can open the teletext software as often as you want and set it to different channels, the contents of different stations can be compared and evaluated – an indispensable function for soccer and stockmarket fans alike!

TerraTV Radio+ proves itself connection-friendly through a coaxial antenna connection, just like you are used to from your house antenna, a video-in for a video camera or VCR and an SVHS input for high-grade SVHS components. Its simple connection options for video cameras or webcams make the TerraTV Radio+ ideal for video conferences via the Internet. TerraTV Radio+ - total input!
